

SCHULTE STRATHAUS

The Schulte Strathaus Group is a manufacturer of material-handling technology for bulk materials as well as vibratory machines for the foundry, recycling and forging industry. It consists of Strathaus Schulte GmbH & Co. KG, based in Werl, and Cyrus Schwingtechnik GmbH in Recklinghausen. While conveyor belt scrapers and accessories are designed and manufactured in Werl in the Sauerland, the employees at Cyrus manufacture vibratory machinery. The subsidiary Cyrus Schwingtechnik has opened a plant at the third location in Pune, India. Overall, approx. 85 people worked for the company in 2012 and generated a total turnover of 12 to 13 million euros. An additional plant is envisaged on the American continent.

Customers from the foundry, forging, recycling, mining and quarrying industries as well as power plants use the products of Schulte Strathaus, for example, to reduce dirt and dust during conveyor transfer point. Annually, the company invests about 5% of its turnover in research and development; about 40% of the workforce are engineers. Special attention is paid to „clean separation of recyclable materials“ and „dezincification of steel plates.“ To this end, Schulte Strathaus cooperates with universities in Bielefeld, Hamm and Hamburg. The company was founded in 1952 by Dr. Franz Erich Schulte Strathaus in Unna. The first products were mine cars, chains for mining, steel construction as well as conveyor belts. In 2003, Cyrus Schwingtechnik GmbH was acquired and today's Schulte Strathaus Group emerged, still fully-owned by the family. Dr. Michael Schulte Strathaus is the Managing Partner in the 2nd generation.

Complete conveyor system with elements from the STARCLEAN® modular system series

MILESTONES

1952 F. E. Schulte Strathaus GmbH u. Co. KG is founded as a trade office in Unna.

1976 The company Cyrus is established in Recklinghausen and manufactures vibratory machinery.
