

## "Anti-aging" for your torsion tensioning device

**NEW**

**Sealed torsion tensioning device  
Type 720 with override  
More reliable · less maintenance · longer durability**

- Increased lifespan of the tensioning device via dust seal and override function (increases the tensioning where necessary exceeding the spring force)
- Easy to use
- Optimum distribution of the tension

## Flexible and secure

**NEW**

### Click-stop module - tensioning device type 830 with new fine setting

An innovative modification enables the fine adjustment of the scraper in tensioned condition.

This enables the click-stop tensioning device to be combined with both primary and any secondary scraper blades.

## Two methods of increasing the tension

**NEW**

### SPV-830 adapter for the spindle tensioning device Type 980

The adapter 95-ET980-830 enables the known linear adjustment of the spindle tensioning device of the type 980 paired with the type 830 torsion adjustment of the click-stop tensioning device.

This combination is especially suitable for the chevron belt scraper, which requires linear adjustment.

Adapter 830 for torsion adjustment
